

MAURÍCIO RAPOSO

Data Engineer and Data Analyst

Summary

Data Engineer and Data Analyst working with process automation, data engineering and analytical reporting. Experienced in Python (Pandas, NumPy, Matplotlib), advanced SQL (PostgreSQL and SQL Server), API integration and bot development for report delivery. Responsible for business critical automations running in production, including a routine that reduced a manual process from 1 to 2 days to 5 to 10 minutes. Currently studying Systems Analysis and Development, with focus on data quality and analytical accuracy.

Professional Experience

- May/2025 – Present
BSA Tech

Junior Data Engineer and Data Analyst

- Development and maintenance of Python scripts (Pandas, NumPy, Jupyter) for data processing and automation of operational routines.
- Writing advanced SQL queries (PostgreSQL and SQL Server) with joins, subqueries and CTEs to calculate KPIs such as GGR, turnover and retention.
- Creation and structuring of database tables (DDL), defining keys, relationships and data types to ensure data integrity.
- API integration for authentication and real time file collection through the Microsoft Graph API (OneDrive/Excel).
- Development and support of two Telegram bots used by the KPI and Product teams to deliver complex reports.
- Building Matplotlib visualizations and running cross validation of data across the database, Excel, Power BI and BetMetrica before delivery.
- Technical on call support: fixing failures in bots and data collection routines, investigating data discrepancies and running emergency SQL queries.
- Version control with Git, backlog management in Jira and alignment with teams to gather requirements and validate business rules.

- Aug/2024 – May/2025
BSA Tech

Data Analysis Intern

- Extraction and integration of data from relational databases and external spreadsheets to centralize information in internal databases.
- Development of Python scripts for data cleaning, treatment and normalization (ETL).
- Building SQL queries for recurring reports and checking data consistency and primary keys.
- Support in creating metric tracking charts, version control with Git and documentation of tasks in Jira.

Education

Systems Analysis and Development

UNIBRA, Centro Universitário Brasileiro

In progress | Expected graduation: Dec/2026

Languages

- Portuguese: native
- English: intermediate

Technologies

- Python
- SQL, PostgreSQL and SQL Server
- Data modeling and structuring
- API integration
- Automation and bots
- Git and GitHub
- Linux (Ubuntu / WSL)
- VS Code and Jupyter Notebook
- Power BI, BetMetrica and Jira
- Excel and Google Sheets

Soft Skills

- Logical and investigative thinking
- Self management and prioritization
- Analytical accuracy and attention to detail
- Clear technical communication
- Resilience and sense of urgency
- Teamwork
